WORKING BRIEF

SIEMENS ENERGY — TICKET 6771028, AND WHAT REGISTRATION ACTUALLY INVOLVES

internal working document — not for issue to a client or a buyer

Document	Siemens Energy — ticket 6771028, and what registration actually involves
Source	business/marketing/siemens-energy-supplier-registration.md

From: Siemens Energy Customer Support Center, ticket 6771028 **Says:** to become a supplier, register via the Collaborating with Siemens Energy page. **Date:** 15 October 2026

An auto-routed redirect from a support desk. It is not a rejection and it is not an opening — it is the public front door, sent to everyone who writes to the wrong address. The reply should be three lines, and the value is entirely in doing the registration properly.

The reply

> Subject: Re: Ticket 6771028 — supplier registration

> Dear Customer Support Center,

> Thank you. I will register ETABLIX Limited through the supplier portal.

> So that it reaches the right category: our services are site establishment and temporary site services for construction and infrastructure projects — compound and welfare, temporary power and utilities, security, waste, catering, workforce accommodation, logistics, and demobilisation and reinstatement. If that sits with a particular business area rather than central procurement, I would be grateful if you could note it on this ticket.

> Kind regards,

> Justin Ngolu Nseya MCIOB Managing Director, ETABLIX Limited

That is as much as a support centre can act on. Asking them to annotate the ticket with the category is the only request they can actually grant, and it costs nothing if they do not.

What registration actually involves — and where it will stop

From Siemens Energy's own published supplier process, not from guesswork:

- **1. Registration runs through SAP Ariba.** Company details, an administrator, business data, product and service categories, ship-to locations.
- **2. Registering is not the thing that matters.** Suppliers then complete qualification modules chosen by their product or service portfolio: the **Sustainability Self-Assessment**, plus further modules on **health and safety** and **cyber security**.
- **3. "Ready-for-Business" (R4B) is the gate.** That status is what permits a supplier to take part in electronic invitations to tender and auctions. A registration that never reaches R4B is a database row.

So the real work is the modules, and two of the three touch a known gap.

- **Sustainability Self-Assessment** — a self-assessment, not a certification. Answerable honestly today, and the honest answers are acceptable.
- **Health and safety** — this is where the absence of SSIP registration or a documented equivalent will be felt, along with accident and enforcement history. The documented health and safety policy already built

covers the substance; what is missing is third-party verification.

- **Cyber security** — the module that makes **Cyber Essentials** worth buying sooner than planned. It is the cheapest certification on the list and it answers a named gate directly, rather than generally improving the paperwork.

Two standing cautions

Never pay to register. Registration as a supplier to a buyer is free. If any step asks for a subscription, a listing fee or a paid upgrade to be visible, stop and check what is being bought — that is a different product from being on Siemens Energy's supplier list.

Claim nothing in the modules that is not held. No ISO certification and no SSIP registration exist, and a questionnaire answer is a declaration. Answer "documented, not certified", attach the policy, and let the gap be visible. A discovered overclaim closes a door permanently; a visible gap only narrows it.
