SITE SYSTEMS DIAGNOSTIC

Testing the whole circle

Document	End-to-end acceptance test — client engagement to closed account
Test pack	NORTHREACH-diagnostic-pack.zip — 18 client documents, 33 planted findings
Scoring key	SCORING-KEY.md — beside the zip, never inside it
Duration	Approximately twenty minutes, plus the diagnostic run
Prerequisite	An AI provider key connected under Organisation → AI agents
Revision	B — corrected 8 September 2026

Twenty minutes, on the live site. It is a fair test: the pack contains 33 planted findings and the key says what they are. The key sits beside the zip and never inside it, so uploading the whole pack cannot hand the agent the answers. Do not read it until after you have read the report.

What this test proves, and the figures to check it against

Each row is a number the platform must produce on its own. If any one of them has to be typed in by hand, the circle is not closed.

Expected	Value	Where it must appear
Deposit invoice, 30% of the fee	£1,950	Portal and document studio, in the same second, on the client's confirmation
Balance invoice on approval	£4,550	Raised at the moment the client approves — not requested afterwards
Total invoiced	£6,500	Equal to the agreed fee, to the penny
Checklist lines built from the deliverable	14	Portal, without anybody writing them
Client documents read by the diagnostic	18	The files the client already sent — no second upload
Of those, routed to vision	3	The two drawings and the Gantt print
Report due date	10 working days	From the day the last mandatory line was answered
Planted findings to mark against	33	SCORING-KEY.md, after the report is read

BEFORE YOU START

Check the AI provider is connected: **Control Desk** → **Organisation** → **AI agents**.

Without a key the diagnostic will refuse to start, and it will say so.

The circle

Eight steps. Tick each one as it passes and note anything that does not — the test record is the point, not the walkthrough.

1 · Open the engagement

Control Desk → **Client engagements**.

Client **Marrowbridge Infrastructure Ltd**, project **Project NORTHREACH**, deliverable **Site-services feasibility review**, Model A, fee **6500**, your own email as the contact, tick **CONSTRUX in scope**.

Pass / fail	
-------------	--

2 · Issue the portal

One button. It mints the link, builds the 14-line checklist from the deliverable, and emails both.

The link is printed back to you and the panel has a **Copy** button.

Pass / fail	
-------------	--

3 · Be the client

Open the link in a private window. You should see the checklist, the ten-working-day clock note, and the deposit and balance both stated with their reasoning.

Unzip the pack and work down the list, attaching the documents. **Every file in the pack has a home on this list** — if one is left over, something is wrong, because fifteen of the thirty-three planted findings need **inputs/01** or **inputs/03**.

Checklist line	What to attach from the pack
Project programme	programme/*-ganttt.pdf, programme/*-tasks.csv and inputs/01-project-programme.md
Workforce forecast	inputs/02-workforce-forecast.md
Proposed site layout	both files in drawings/ and inputs/03-proposed-site-layout.md
Logistics plan	inputs/04-existing-logistics-plan.md
Temporary services	inputs/05-... and annexes/C-...
Procurement packages	registers/*-xlsx and inputs/06-...
Mobilisation constraints	inputs/07-... and annexes/A-...
Site and utility information	inputs/08-...
Anything superseded	the remaining annexes/ files
The five commercial lines	type an answer, or mark one not held to see that it settles rather than nags

WORTH DOING DELIBERATELY

Mark one mandatory line *I do not hold this*, with a reason.

It should be refused without a reason, accepted with one, counted as answered, and **never chased again**. That is the "no repetition" claim, and it is the one to test.

Pass / fail	
-------------	--

4 · Confirm the start

Tick the authorisation box and give a name.

An **INV-2026-nnn** for **£1,950** (30%) should appear in the portal **and** in the document studio within the same second. Open it: reverse charge applied, your PO reference on the face of it, and it says on itself that it was raised automatically on the client's instruction.

Pass / fail	
-------------	--

5 · Take the payment

Back on the desk: **Deposit ... received.**

Pass / fail	
-------------	--

6 · Run the diagnostic

The button now says **Run the diagnostic on their pack.** It runs on the files the client already sent — *no second upload.*

The handover date is read from the record — the day the last mandatory line was answered — and the report due date is ten working days from it.

Six passes, several minutes. Watch it under **Organisation → AI agents.**

Pass / fail	
-------------	--

7 · Publish it

Back on the engagement, in *Publish a deliverable*, leave **Issue the completed diagnostic run as the report** ticked, add a summary, list the sections the client may comment against, and publish.

It mints a numbered **SSD-2026-nnn** carrying the handover and due dates.

Pass / fail	
-------------	--

8 · Be the client again

Read the report in the portal. Then, in order:

Try **Review with comments** with no comment — it should refuse you.

Add a comment against a named section and send it back.

Reissue from the desk, then **Approve.**

Approval should raise the **£4,550** balance invoice at the moment of approval. Mark it received; the engagement closes; the two invoices sum to **£6,500.**

Pass / fail	
-------------	--

Then judge it

Read the report first. Write down what you think it found. **Then** open [SCORING-KEY.md](#) and mark the report against the 33 planted findings — how many it caught, how many it invented, and whether the ones it caught are stated well enough to put in front of a client.

Mark	Count	What it means
Found		Stated, with its consequence in days, money or a named consent
Partially found		The right thing identified, but no consequence quantified
Missed		Not raised at all
Invented		Raised, and not true. This is the one that costs a client relationship
TOTAL PLANTED	33	

THE FOUR THAT MATTER MOST

The contradictions between two documents written weeks apart by different people.

Anything can list what is in a programme. Finding that the shift pattern in the programme is prohibited by a planning condition in a different file is the thing worth paying for.

If something breaks

First, check the pack itself

The zip is generated from [northreach/](#), so build it and audit it in one step:

```
./diagnostic-test/build-pack.sh
```

Eight checks: the zip exists and is not stale, it matches the folder, the answer key is not inside it, every client document has a home on the checklist above, every file the script names exists, the headless test uploads the same set you do, the upload gate accepts every file type in the pack, and the counts the pack asserts about itself are true.

Then the circle itself, headless

It needs a running server and either a real key or the mock:

```
PORT=3311 SITE_URL=http://localhost:3311 node backend/server.js &  
node backend/test/circle.e2e.mjs
```

20 assertions, from the engagement to the closed account.

And the two portal promises

```
node backend/test/portal-promises.e2e.mjs
```

16 assertions: that *I do not hold this* settles rather than nags, and that a decision which changes the work is refused without the reason that would let it be answered.

IT WRITES TO THE DATABASE IT RUNS AGAINST

Point the headless tests at a scratch copy, or back up [backend/data/db.json](#) first and restore it afterwards.

If the live site misbehaves, run these three first — they tell you whether the fault is the platform or the environment.

Test record

Complete this before reading the scoring key.

Tested by	
Date	
Model and key in use	
Steps 1–8 all passed?	
Deposit invoice value observed	
Balance invoice value observed	
Total invoiced	
Documents read by the diagnostic	
Of those, routed to vision	
Report due date shown	
Findings caught / partial / missed / invented	
Would you put this report in front of a client?	

The last line is the only question that matters. Everything above it is evidence for the answer.
