

The background of the entire slide is a photograph of several large tower cranes at a construction site during dusk or dawn. The sky is a deep, dark blue with some lighter, wispy clouds. The cranes are silhouetted against the sky, with their long jibs extending across the frame. The overall mood is industrial and professional.

ETABLIX

INTEGRATED SITE SERVICES · PART OF GROUPE NSEYA

One site. One accountable operating system.

Every temporary-site and workforce-accommodation service on your major projects — planned, procured, integrated and controlled by one contractor, from first mobilisation to final reinstatement.

AN EXECUTIVE INTRODUCTION FOR TRANSMISSION OWNERS, OEMS AND PRINCIPAL CONTRACTORS DELIVERING THE UK GRID BUILD-OUT

The biggest grid build-out in a generation will be won or lost in delivery — not design.

Substations, converter stations, HVDC landfalls, data-centre connections: more major energy sites will mobilise in the next decade than in the last three. Whatever seat you hold — transmission owner, OEM or principal contractor — three pressures land on the same desks:

Concurrent mobilisations

Portfolios that once mobilised one flagship site at a time are standing up **several at once** — each demanding the same scarce set-up expertise, at the same time, often in remote locations.

Senior hours burnt on the site behind the site

Project directors and construction managers are specifying cabins, sizing generators and chasing welfare suppliers — **senior delivery capacity spent on temporary works** instead of the asset you were appointed to build.

Workforce accommodation is now on the critical path

Remote sites cannot staff up without beds, catering and welfare that **work from day one** — and worker-welfare standards are under more scrutiny than ever.

The engineering is world-class. The constraint is everything around it — **and today, nobody owns that as one system.**

The project rarely fails because a supplier is incompetent. It fails because nobody owns the complete system.

A major site buys its temporary environment as **15–25 separate contracts** — cabins, power, water, welfare, security, cleaning, catering, transport, waste, accommodation. Each supplier does exactly what its order says. The seams between them belong to no one:

The generator is sized to a village layout nobody updated. The gatehouse data link sits between two contracts. The cabins arrive before their power does. **Each failure is discovered the week you needed it working** — and it is discovered by your site team.

Where the cost lands

Mobilisation delay · prelims escalation · senior delivery hours consumed as the human middleware between suppliers — none of it visible on any single package budget.

We mapped a typical mid-size site set-up as one system.

18

PACKAGES

41

INTERFACES
BETWEEN THEM

9

WITH NO
OWNER

Nine points where the plan says nothing about who acts.
One of them, in full:

IF-07 – Generator sizing vs. village load

The power package is sized against the original accommodation layout. The village has since grown by two cabin rows. **No line in either contract makes anyone responsible for reconciling the two.** It surfaces in week 3 of mobilisation as “no power to block C” — and by then it costs programme, not paperwork.

Illustrative model built from tier-one delivery experience — not a client’s data. We map **your** site’s real register in ten working days (slide 11).

Every unowned interface is a delay that hasn’t happened yet. Finding them on paper costs days. Finding them on site costs programme.

One accountable partner for the complete site environment.

We are not a main contractor. We do not build the permanent asset and we do not compete with the contractor who does. ETABLIX plans, procures, integrates and controls the temporary environment *around* the permanent works — **twenty-one specialist trades**, one contract, one point of accountability, one live view. Your teams deliver the asset; the late cabin supplier, the under-sized generator and the broken toilet at 7am become **our problem, contractually**.

PLAN	PROCURE	INTEGRATE	OPERATE & CONTROL	DEMobilise & REINSTATE
Design & planning Temporary works engineering (BS 5975) · utility surveys · site & logistics design	Establish the site Enabling civils · trackway & wheel-wash · fencing, hoarding & signage · Chapter 8 traffic management		Utilities & connectivity Power, generators & fuel · temporary MEP · water, wastewater & sanitation · IT & telecoms

Not a promise — an operating system.

- **An interface register with a name against every seam.** Each of the 30–50 interfaces on your site gets an owner, in writing, before mobilisation — the register your site team wishes existed.
- **Mobilisation gates.** Defined readiness checks that catch mismatches on paper — weeks before they can cost programme on the ground.
- **Suppliers paid on Earned Value, never on bare invoices.** Measured quantities, inspections and evidence gate every payment; performance below threshold triggers commercial review automatically.
- **One live dashboard, one weekly report.** Every service, supplier and interface in a single view your directors can open — delivered on CONSTRUX, the operating platform we built and run.

Portfolio						
CODE	PROJECT	SECTOR	STATUS	VALUE	PROGRESS	MANAGER
ETX-2401	400kV Substation — Site Establishment & Welfare Confidential grid client · 2026-01-12 → 2027-03-30	Grid / power	IN PROGRESS	£4,250,000	63%	Dana Okafor

ETX-2408	Catering & laundry facility commissioning	Operate	2026-08-20 → 2026-11-05	18%	—

A live screenshot, not a mock-up. CONSTRUX — programme, cost, quality, risk and site telemetry in one place. Every ETABLIX engagement runs on it; your team gets a seat, not a PDF.

Your workforce village, run as one operated service.

A village is not a stack of cabins. It is beds, welfare ratios, kitchens, laundry, security, housekeeping, occupancy management and resident experience — operating as one service, every day of the programme.

Demand-modelled, not guessed

Beds, welfare and utilities sized from your workforce curve and shift pattern — with the calculation basis shown, and capacity checked against occupancy as the programme moves.

Compliance you can evidence

Welfare standards, food and water safety, fire assurance and accommodation inspections — documented continuously, because your name is on the site.

One accountable manager

A named ETABLIX village manager owns occupancy, defects, complaints and every service provider — your site team stops fielding the noise.

Productivity protected

A workforce that sleeps, eats and moves well turns up and stays — on remote programmes, the village **is** the retention plan.

Three models. You choose how much transfers.

MODEL A

Advisory

We define the complete site-services solution — requirements packages, interface matrix, procurement documents, tender evaluation. **You contract and pay suppliers directly.**

FITS WHEN

Your team wants to keep commercial control but stop designing the temporary works from scratch. Fixed fees, defined deliverables.

MODEL B

Management Integrator

We run the complete system on your behalf — coordination, interfaces, supplier performance, the village, the dashboard — while **supplier contracts stay with you.** Operational control without balance-sheet transfer.

FITS WHEN

You want one accountable manager for the site environment and your site leadership back on the permanent works.

MODEL C

Prime Service Contractor

We contract the supply chain and deliver the complete service — one contract, one price built as a **transparent stack**, contingency governed against a joint risk register.

FITS WHEN

You want single-point accountability for the whole temporary environment, priced openly.

A deliberate discipline: **prime means prime for the site-services system**, never for the permanent works — and never “Principal Contractor” by accident. CDM 2015 duties are taken only by explicit, priced, insured appointment. If we ever hold them, it will be because you and we decided so in writing.

Built by someone who sat on your side of the table.

Inside a tier-one grid OEM, **Justin Nseya MCIOB** built the site-integration system and wrote the workforce-village requirements packages himself — weeks of senior delivery time spent specifying cabins, utilities and welfare instead of delivering the project. That experience is why ETABLIX exists: the industry buys site services in pieces, and someone has to own the whole.

- **Founder-led delivery.** The Managing Director attends your project reviews personally — and answers direct enquiries within one working day.
- **Our own operating platforms.** CONSTRUX (project control) and VERYX (portfolio risk) are built and run in-house — nobody else walks into your office with their own operating system.
- **Part of the Groupe Nseya structure** — headquartered in Birmingham, serving UK, Ireland and selected international programmes.

Justin Ngolu Nseya MCIOB

Founder & Managing Director
Chartered Member, CIOB

We are asking you to concentrate risk with us. So check us before you believe us.

Legal identity

ETABLIX is a trading name of **JNN GLOBAL LTD**, registered in England & Wales, **Company No. 15405437**. Look us up on the Companies House register — don't take this slide's word for it.

The person

The founder is a Chartered Member of the CIOB with a public delivery history — verify him on LinkedIn. Insurance limits and certificates are provided with every proposal, **before you sign anything**.

The product

The dashboard on slide 6 is a live screenshot. The diagnostic sample at **etablrix.com/diagnostic-sample** is our actual report format, watermarked and public.

And here is what you will **not** find behind our name: borrowed logos, stock-photo testimonials, or case studies we didn't deliver. We are a new company at the start of its record — **when we publish proof, it will be real proof**. We'd suggest holding every contractor you evaluate to the same standard.

Start with a Site Systems Diagnostic.

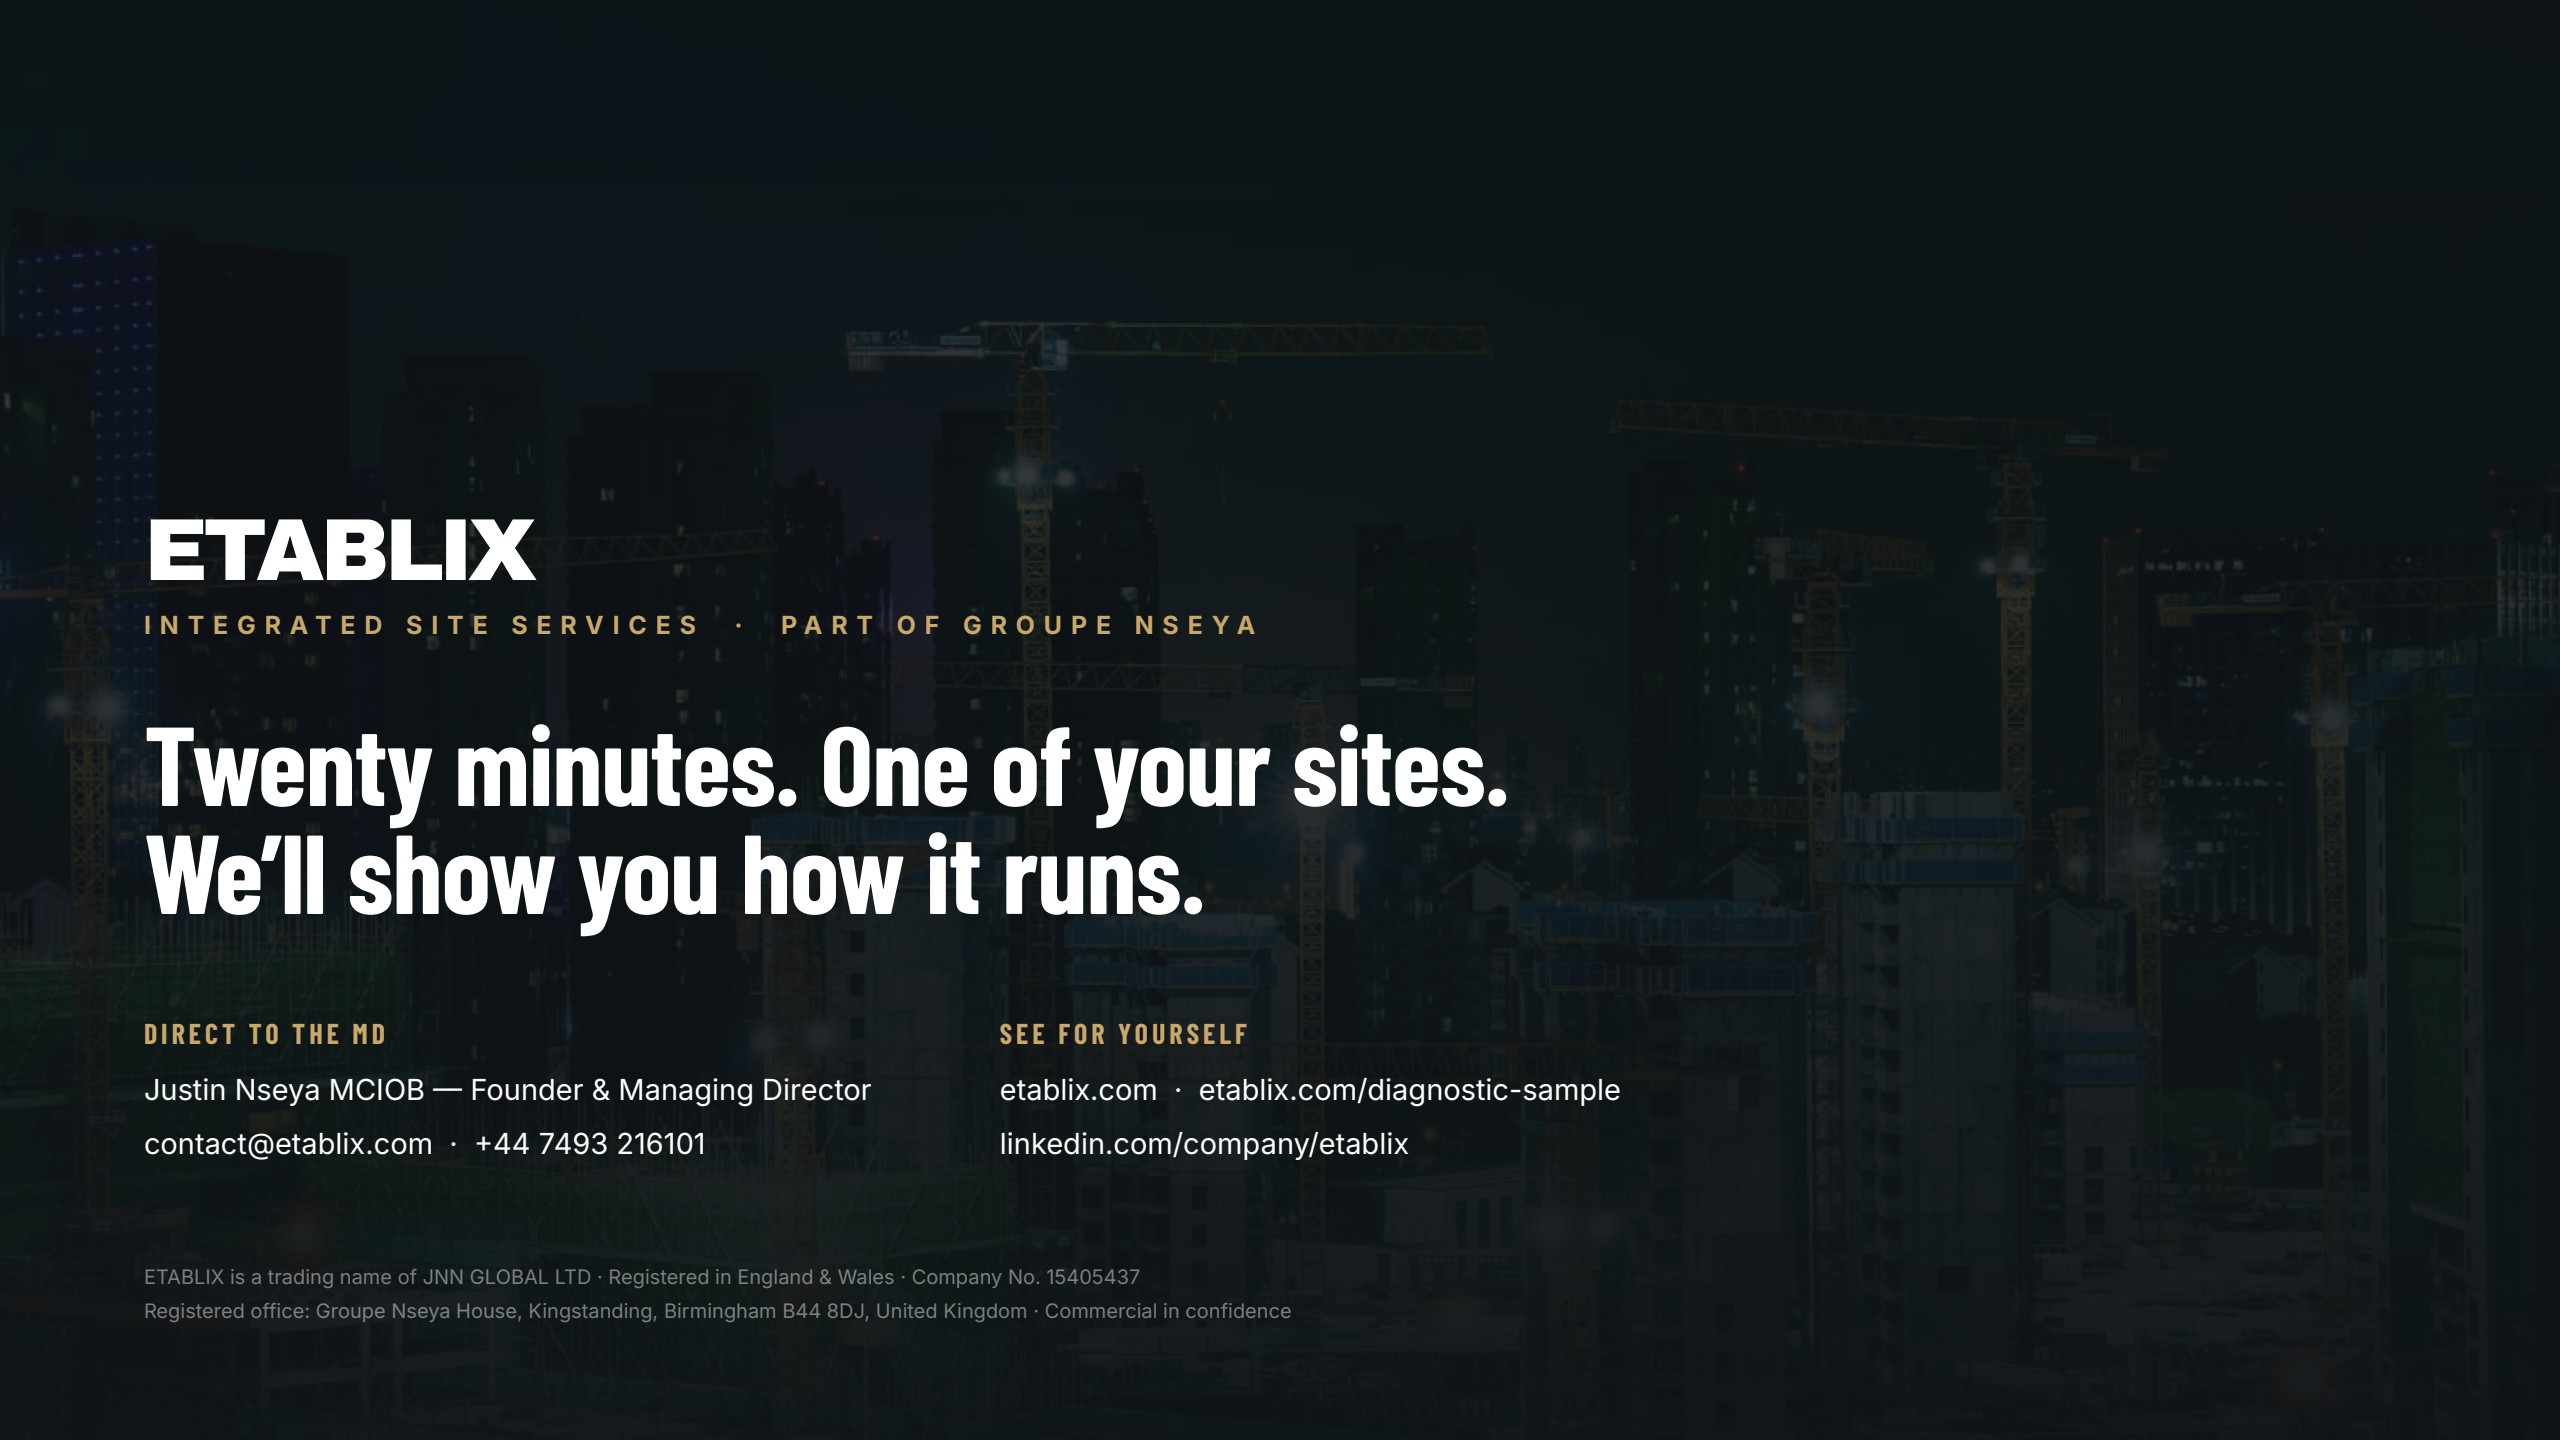

**Fixed fee.
Defined deliverable.
Ten working days.
Yours to keep.**

No lock-in, no obligation, no “call to discuss pricing”. You get the report whether or not you ever use us again.

Pick one live or upcoming site. In ten working days you receive the map your delivery team wishes it had:

- Every temporary-works and accommodation **package**, mapped as one system
- Every **interface** between them — and every one with **no owner**
- The **mobilisation gates** that catch the gaps before they cost programme
- Prioritised **decisions** for your team — whoever you appoint to act on them

The report format is public and watermarked at etablrix.com/diagnostic-sample — see exactly what you’re buying before we speak. If you have a mobilisation in the next two quarters, the diagnostic is the cheap time to find its nine unowned interfaces.
