SUPPLIER QUALITY ASSESSMENT

ISO 9001:2015 COVERAGE

documented arrangements mapped to the standard — not certified, and not claiming to be

Document	ISO 9001:2015 coverage statement
Company	JNN GLOBAL LTD, trading as ETABLIX · Company No. 15405437
Certification status	NOT CERTIFIED. No ISO 9001 certificate is held and none is claimed.
Purpose	To let an assessor see, clause by clause, what is documented, what is partial and what is absent
Companion document	ETABLIX Quality Management Arrangements — the arrangements themselves
Date	7 October 2026

1. What this document is, and what it is not

JNN GLOBAL LTD, trading as ETABLIX, does not hold ISO 9001 certification and does not claim it. No certification body has audited this company, and nothing here should be read as equivalent to a certificate. This document exists so that an assessor can see what is actually documented rather than infer it from the absence of a certificate.

It is issued in response to a supplier quality requirement which asked for documented, auditable business processes, and for the position to be stated plainly where third-party verification is absent. That is what follows.

Roughly a third of the rows below record a requirement that is not met. That is the point of the document. A coverage map with no gaps in it would be a certificate, and this is not one.

How to read the status column

Status	What it means here
Documented	A named section of a signed, dated company document addresses the requirement, and the arrangement is in operation.
Partial	Something addresses part of the requirement. The part that is not addressed is named in the row.
Not in place	Nothing addresses it. In every case the reason is stated, and in most cases the reason is that the company has one working director and no completed engagements.

2. Clause by clause

References are to sections of the ETABLIX Quality Management Arrangements unless another document is named.

Clause	Requirement	Status	Where it is addressed, and what is missing
4.1 – 4.2	Context of the organisation, interested parties	Partial	The nature of the work and what a defect is in it are defined at section 2. Interested parties are identified in practice (client, main contractor, specialist subcontractors) but are not documented as a formal register.
4.3 – 4.4	Scope and processes of the system	Documented	Scope is stated at section 2: the company produces documents and decisions rather than physical works. The processes are set out at section 3.
5.1 – 5.3	Leadership, policy, roles and responsibilities	Documented	One working director holds every role and the document is signed and dated by him. Responsibility is not diffused because there is nobody to diffuse it to, which is stated rather than disguised.
6.1	Actions to address risks and opportunities	Partial	Delivery risk is addressed at the engagement level and the capacity rule at section 10 of the method statement declines work that cannot be staffed. There is no standing organisational risk register.
6.2 – 6.3	Quality objectives, planning of changes	Partial	Three requirements are defined at section 2 — the output is right, traceable and on time — and each arrangement serves one of them. They are not expressed as measurable annual objectives, because there is no delivery history to set a baseline from.
7.1	Resources	Documented	One director, named associates under section 3.7, and the capacity rule that declines work which cannot be staffed.
7.2 – 7.3	Competence and awareness	Documented	Section 3.2. Competence is held by a named individual: MCIOB Chartered Construction Manager, MSc BIM Management, BSc (Hons) Construction Management, APMP, PRINCE2 Foundation, CDM 2015 Principal Designer training, CSCS.
7.4	Communication	Documented	Scope agreed in writing before work starts (section 3.1), reporting obligations defined per engagement, and client feedback at section 3.6.
7.5	Documented information, control of documents and records	Documented	Section 3.4 for document control; section 4 for records and retention periods, which are set longer than most suppliers assume.
8.1	Operational planning and control	Documented	Section 3.1. Nothing starts without a written agreed scope stating what is to be delivered, to whom, by when, on what information, and what is excluded.
8.2	Requirements for products and services	Documented	Section 3.1, and the contract is read in full rather than in summary before the work is planned.
8.3	Design and development	Not applicable	The company does not carry out design. Where a client wishes a duty holder role to be held it is appointed expressly and in writing, and CDM 2015 Principal Designer training is training rather than an appointment.
8.4	Control of externally provided processes, products and services	Documented	Section 3.7. Associates and subcontractors work to a written scope and a defined checking regime, and the client is told when one is engaged.
8.5	Production and service provision	Documented	Section 3, read as a whole.
8.6	Release of products and services	Partial	Section 3.3 requires checking before issue. The check is performed by the author, because there is no second competent person. This is the system's principal limitation and it is stated in both documents rather than written around.
8.7	Control of nonconforming outputs	Documented	Section 3.5. What happens when something goes wrong, including correction, notification and the record kept.
9.1	Monitoring, measurement, analysis and evaluation	Partial	Client feedback is sought and recorded under section 3.6. There is no performance data yet, because no engagement has been completed under the company.
9.2	Internal audit	Not in place	There is no internal audit programme against a standard, and the reviews at section 5 are management reviews and are called that. Independent internal audit is not credible with one person and is not claimed.

Clause	Requirement	Status	Where it is addressed, and what is missing
9.3	Management review	Documented	Section 5. Reviewed on the dates recorded on the cover and reissued whenever the work, the people or the law changes.
10.1 – 10.2	Improvement, nonconformity and corrective action	Documented	Section 3.5, together with the record kept under section 4 so that a recurrence is visible rather than remembered.
10.3	Continual improvement	Partial	The mechanism exists through management review and the error record. There is no trend to improve against yet, and inventing one would defeat the purpose of keeping the record.

3. The four things that are not in place

Consolidated so that nobody has to assemble them from the table.

- No ISO 9001 certificate, and no audit by any certification body. Section 1.
- No internal audit programme against a standard. Clause 9.2. An internal audit performed by the only person in the company on their own work is not an audit, and calling it one would be the least credible thing in this document.
- No independent second-person check before issue. Clause 8.6. The mitigation at section 3.3 of the Arrangements is a structured self-check against the written scope, and it is described as that rather than as independent review.
- No performance or error history. Clauses 9.1 and 10.3. There have been no completed engagements under the company to generate one. Both are recorded from the first engagement onwards.

Each of these closes with scale rather than with intent. The second-person check and the audit programme arrive with the second competent person; the performance history arrives with the first completed engagement. None of them is waiting on a decision.

4. Position on certification

An ISO 9001, 14001 and 45001 roadmap sits in the company's compliance plan. Until a certificate is issued by a UKAS-accredited certification body, nothing this company issues will describe its quality arrangements as certified, approved or compliant with the standard.

Including this document. It maps what exists against the structure of the standard so that an assessor can judge coverage quickly. It does not assert conformity, it has not been audited, and a clause marked Documented here means a company document addresses it — not that any external party has verified that it does.

Declaration

I confirm that the statuses recorded above reflect the arrangements actually in operation at the date of this document, that no ISO certification is held or claimed, and that the gaps at section 3 are stated in full.
